UPGRADE TO SYMANTEC ENTERPRISE VAULT 8

Your email archive represents a valuable repository of business data

Protect your investment by upgrading to the latest version of Symantec Enterprise Vault.

Symantec has now released Enterprise Vault 8, the latest version of its market leading email archiving solution. As an existing user of Enterprise Vault, you can upgrade to enjoy new product features and stay up to date with product improvements.

If you have valid software maintenance, you are already entitled to a software upgrade without additional expenditure. Plus, as a Phoenix Software customer, you can take advantage of a very special offer - upgrade to Enterprise Vault 8 and receive a comprehensive health check of your archiving system.

Why Upgrade?

You already benefit from reduced storage costs and simplified management of your email environment, but by upgrading you can continue to benefit from over 10 years of product development.

The latest features include:

Optimised Single-Instance Storage

- Optimised Single-Instance Storage (OSIS) reduces the archive footprint for better total cost of ownership. OSIS allows the archive to share commonly repeated data between archived items like email, SharePoint documents, file system documents, reducing the footprint down to only one copy in the archive regardless of source

- Integration with de-duplication technology enables the combination of backup and archive data to further reduce the archive and backup data footprint. A broad range of technology partners and supported platforms gives customers freedom of choice and flexible archive deployment options

- Intelligent archiving enables selective retention of critical vs. non-critical information, reducing the costs associated with search and collection of electronic data

Next Generation End User Experience

- Allows transparent access to archived items from familiar interfaces like Outlook, Notes or Windows Explorer meaning there is no separation between live and archived information

- Access via Blackberry and Windows Mobile devices allows users on the go to search* and access to archived information anytime/anywhere

- Access to information stored in PST and NSF files via Outlook Web Access and Domino Web Access

- Simplified e-Discovery with Guided Review for distributed teams that require centralised access

* Note - Mobile Search support is currently available as a beta release

Simplified Deployment, Administration and Management

- New installation process and setup provides recommendations and default settings based on industry best practices to get Enterprise Vault up and running in minutes

- Common Tasks dashboard makes day-to-day administration simple by providing quick access to common tasks and operations within Enterprise Vault

WE'RE NUMBER 1!

Phoenix Software is the **number 1 Symantec partner for Enterprise Vault deployments** - this means you can have **complete confidence** in the **professional services** we provide:

"Phoenix was an invaluable resource to have. They were clearly very experienced in Enterprise Vault and other Symantec solutions and their professionalism was evident throughout the deployment. As we've moved forward, Phoenix has continued to be proactive, committed and aware of the challenges we face."

Neil Edwards, Server Infrastructure Manager, moneysupermarket.com

"The implementation of Enterprise Vault has provided Wirral Partnership Homes with a future-proof solution to deal with the growth of email data, as well as enabling us to comply with legal compliance for any disclosure of information. The implementation process was very smooth and straight forward due in part to the technical expertise of Phoenix staff, the project management and simplicity of the product for our end users."

Gordon Flack, IT Manager, Wirral Partnership Homes

"Thanks to Phoenix Software and Enterprise Vault, we are back in complete control of our Exchange environment - recovery times have been slashed and the overall administrative burden of looking after Exchange significantly reduced."

Gary Pruce, Group IT Manager, Besso Ltd

- Enhanced policies for flexibility allow users to 're-file' archived messages for new retention requirements
- Ensure compliance with best practices for email archiving
- Review of policies and retention categories
- Advice on correct backup processes and methodology
- Configuration of new role-based administration and reporting features

Discovery Accelerator with Guided Review

- Helps users explore search results by prioritising or clustering the results to perform better early case assessments and understand both the higher level view and specific details
- Guided Review reduces the time and cost of reviewing search results by providing multiple views and facets for a given search
- Reduces costs of legal discovery with powerful end-user, legal and administrator search capabilities

Give your Archive a Health Check

Your archive contains data vital to your business and its performance and protection is essential to your long term archiving strategy. Our technical consultants can upgrade a typical Enterprise Vault configuration¹ within a single day, and provide you with a systems health check at the same time.

A Phoenix Technical Consultant will be on hand to provide advice, answer queries and perform a thorough health check², including:

- Complete check of system performance, servers, databases and indexes

Archive More

Don't forget that Enterprise Vault can archive much more than just email. Have you considered building on your investment to archive other data sources, such as File Systems, Instant Messaging and SharePoint sites? There are also tools to help with discovery and monitoring of email usage for compliance purposes.

Hurry! Special Pricing for a Limited Time

This upgrade offer³ is available to Phoenix Software customers for a limited time at a special price of £899⁴. Please contact your Phoenix Software Account Manager on **0845 265 1265** to take advantage of this offer today.

¹ A typical Enterprise Vault configuration is defined as no more than two non-clustered Microsoft Exchange servers within a single domain at the same geographical location. For larger installations, please contact your Phoenix Software Account Manager for a quotation.

² Consultants may not be able to address serious or large numbers of technical issues as part of the health check provided but will be able to specify the level of further consultancy required.

³ Phoenix Software reserves the right to withdraw this offer at any time without notice.

⁴ Special pricing is available to customers who have purchased Symantec Enterprise Vault from Phoenix Software and is exclusive of expenses.
