Windows Virtual Desktop Essentials Managed Service

Windows Virtual Desktop Essentials Managed Service

As more and more organisations review the use cases for the adoption of cloud hosted Windows desktops, through services such as Microsoft Windows Virtual Desktop (WVD), the more we see adoption of this technology.

Delivering domain joined Windows 10 desktops direct from Azure to your users brings many benefits and our customers are enjoying the flexibility and improved remote working capability this brings to their organisations. With numerous application deployment options, users can access their required applications whilst IT retain control of the data their remote and office-based user access.

Keep Staff Working and Costs in Check

Keeping users working and enabling new staff to be operational quickly is key today and this is where the Phoenix WVD Essentials Managed Service comes in. Through WVD, Microsoft provide the building blocks to run desktops on Azure, but it's the customers responsibility to build and maintain that desktop environment. Phoenix has deployed WVD for many customers and they can all testify that implementing and configuring WVD is a specialist job with detailed knowledge of Azure, PowerShell and networking required as well as image management and app deployment expertise.

The Phoenix WVD Essentials Managed Service provides a low-cost solution to ensure that your WVD environment is always correctly configured, optimised and importantly running in the most cost-effective way possible on Azure. With access to Azure and desktop consultants 24x7x365 when needed, our team monitor and manage your WVD environment to ensure that it's not only operating as it should and your users have access, but we also optimise it on your behalf. Our proactive optimisation covers Azure infrastructure and networking, Azure cost optimisation and right-sizing as well as Windows image management and patching, meaning you don't have to do this tiresome stuff!

In it Together

With scheduled service reviews to go through your environment and 24/7 access to our management systems and service desk, you too can gain the insights we do into your environment to help you plan your future strategy for delivering applications and desktops to your employees.

Given the fast-paced updates made by Microsoft to their WVD platform, Phoenix will ensure your organisation is taking advantage of the most up-to-date features and releases such as Teams optimisation and improved management capability

True Partnerships. Remarkable Outcomes.

By using IT, we believe that we can enable UK Public Sector organisations to innovate, transform and deliver smart connected services to staff, citizens, patients, tenants and students.

We do this by understanding the individual goals of each and every organisation that we work with to help them modernise their workplace by harnessing the power of cloud, data, AI, security and collaboration tools.
