

CLARITY AGILE SAM SERVICE

Helping you achieve greater business value and return on investment through agile software asset management.

In a modern world where many organisations are adopting more agile practices for controlling projects and software development, our Agile Software Asset Management (SAM) managed service fully benefits from these new methods to enable your organisation to respond quickly and effectively to unexpected challenges.

What is our Agile SAM Service?

Our Clarity Agile SAM Service provides continuous SAM business value, executed in agile partnership with all key customer stakeholders. The service focuses on what is most important to the organisation, while guaranteeing return on investment (ROI) and attainment of the company's goal.

Developed alongside our customers, this revolutionary approach to Software Asset Management (SAM) removes the need to create vendor-wide effective licensing position (ELPs) on a regular basis. Instead, Agile SAM is a series of 'bite-sized' services – each with a defined value and documented outcomes – designed to be completed within one month.

The result?

A series of monthly actionable outcomes, each with a business value attached. This allows your organisation to accurately manage cost optimisation or risk mitigation opportunities identified against every piece of work completed.

“

The only flexible SAM managed service to meet the changeable requirements of your organisation.”

THE BENEFITS OF OUR CLARITY AGILE SAM SERVICE

- ✓ Deliver business value where and when you need it most
- ✓ Focus on targeted ITAM priorities in a monthly cycle
- ✓ Eliminate wasted effort by focusing on priority actions
- ✓ Allows inhibitors – such as data unavailability
