CLARITY CORE SAM SERVICE

Outsource your SAM responsibilities to access cost savings, reduce risk, and strengthen business efficiency.

Reducing your IT costs, limiting the risks related to the ownership and usage of software, and increasing corporate-wide efficiencies can be daunting without the right support in place.

Our Clarity Core SAM Service assists your company with the skills and resources you need to successfully meet your business goals.
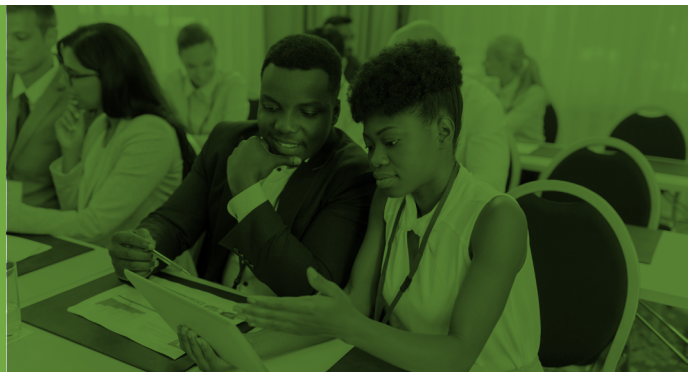

What is our Core SAM Service?

Clarity Core SAM Service is an essential service that simplifies, supports, and strengthens the management of your organisation's SAM lifecycle process.

The service is underpinned by some of the most powerful SAM business solutions on today's market within a single reporting tool, which gives you full visibility and management of your entire IT ecosystem, including on-premise, IaaS, PaaS, SaaS, and cloud-based platforms.

"

Work in collaboration to maximise your investments."

THE BENEFITS OF CLARITY CORE SAM SERVICE

Through continued management of your SAM data, our Clarity Core SAM Service ensures that your company's business managers can quickly and confidently make data-driven, quality decisions based on matters relating to the following core SAM functions:

✅ IT asset inventory

✅ Software assets

✅ Licence reconciliation

✅ Compliance verification

✅ Renewal management

✅ Advisory services

What's included in Core SAM Service?

Our Clarity Core SAM Service manages and reports the full coverage of your whole IT infrastructure, including user devices, datacentre assets, and cloud-based platforms.

Following initiation of the SAM platform, the service drives the collection and upload of all existing contracts and proof of license documentation to ensure that all product use rights are accurately captured and reported.

We also perform a comprehensive analysis of all costs associated with cloud-based platforms, including Microsoft 365, Azure, and AWS, ensuring that all spend is fully accounted for and clearly reported to all relevant key stakeholders.

The Core SAM Service provides access to a web-based portal that promotes interactive visualisations and business intelligence capabilities. Its interface is simple enough for end users to create their own reports and dashboards, allowing faster and more confident compliance, usage, and cost decisions.

On completion of the onboarding phase, the Core SAM Service transitions to an operational phase, which includes continued management of the SAM platform and maintenance of the associated SAM data.

The Core SAM Service includes:

- Archiving all new software purchase transactions, ensuring that contract and proof of licence documents are uploaded, processed and fully up to date within the SAM platform

- Assignment of all product use rights to all software that has been deployed or used, ensuring that the organisation's compliance obligations have been efficiently managed and maintained in accordance with the vendors terms and conditions

- Reconciliation of the effective licence positions for all vendors, ensuring that the organisation has a clear understanding of its compliance status for all products deployed on all company IT assets or consumed by employees on-premise or in the cloud

- Assessments and updates of all licences assigned or consumed in the datacentre, ensuring all business-critical applications are licenced effectively, renewed on time, and negotiated cost-effectively

- Cost analysis of all cloud-based spend (incl. Microsoft 365 and Azure), ensuring budgets, forecasts, reservations, discounts, and other billing commitments have been fully analysed, scrutinised, and accounted for correctly

- Renewal support and managing and controlling renewal spend, ensuring that all related software licences are purchased efficiently, on-time, and within budgetary limits

- Access to software specialists who are available to provide planning and advisory services to all key business stakeholders, ensuring the provision of seamless, quality SAM services, and to support the management of all contracts for software and related assets and services
